

SWALLOWABLE DATA RECORDER CAPSULE MEDICAL DEVICE

Abstract of the Disclosure

5 The present invention provides a swallowable data recorder medical device. The swallowable data recorder medical device includes a capsule including a sensing module for sensing a biologic condition within a body. A recording module is provided including an atomic resolution storage device. The recording module is electrically coupled to the sensing module for recording
10 data representative of the sensed biologic condition in the atomic resolution storage device. A power supply is coupled to the recording module.
